VITALINK STORY

This is story on how having a Vitalink pendant prevented my sister from very serious results from a fall.

My sister lives alone (with her two cats) near Sacramento. At age 83 she is involved in various activities in the community. She is in good physical shape and goes to the gym for workouts and swimming. She had two hip replacements which worked well and did not give her any problem.

I have had a Vitalink pendant for over a year. It has been a safety factor in case I should fall or need some help. I will have immediate results

I insisted that my sister get a pendant in case she fell and could not get to the phone. Thank heavens she ordered one. She did fall several days ago while getting up off her couch and losing her balance. She sustained a spiral fracture to her femur when she fell and was unable to move to get to the phone. But she had her pendant on. She pressed that and was able to talk with someone at Vitalink. They called her daughter in law. She went to my sister's home and called an ambulance. This fall happened at 5:30 pm. If she had not been found immediately, she would not been found until sometime the next day. It would then be a really serious problem

The recovery will take perhaps four to six weeks in a Rehabilitation Center.

So in conclusion, I have suggested to all of my women friends at whatever age who live alone to use Vitalink. We never know when we are going to need it.

Thanks,

(Mrs.) Loel M. Buckley
